FYI: Public Comment

I am writing against the proposed Republic Corporation of drilling 2 injection wells at their Coopersville, Michigan Landfill site. I am against the proposal due to the fact that my dwelling utilizes the aquifer that Republic plans to drill through for their wells. Our well is over 200 feet deep and over that last few years we have been experiencing periodic trouble with pumping water for our cooking, bathing, etc. This past summer, we had to sink our pump an additional 40 feet due to other homes needing to water their lawns due to the hot dry summer we were incurring. Our current Township Officials have no plans to work with the Grand Rapids or Wyoming Water Department to run pipe lines to the homes in the township. We are located 1/2 mile from the Grand Rapids, Michigan Water pipe line. Knowing how Corporation put profits over Quality, Personal Health, etc., it might not be a year or two, 3 or 4, but sooner or later, they (Republic) will cut corners (whether in maintenance, etc.) that our water supply will become contaminated.

Again, I reiterate that we are against their proposal for the 2 wells being drilled. We DO NOT need another Wolverine Tanning scenario with PFAF contamination like what happened in Rockford, Michigan. People in the area are still on bottled water after so many years.

Thank you,

Sincerely,
